

YAMAHA DFP9415

Produttore : Yamaha

Cod.Art. : 1928

DOPPIO PEDALE PER GRANCASSA

Doppio pedale per grancassa direct-drive.

Specifiche tecniche

- Direct drive: The DFP-9415 has a cast alloy direct drive link that is smooth and strong. The footboard height and beater angle are independently adjustable so you can dial in the pedal to suit your individual style.
- Ball bearing hinge: The hinge that connects the footboard and the heel plate is cast to tight tolerances and rotates on ball bearings eliminating any side-to-side movement. This keeps the footboard and drive mechanism in line for a smooth stroke that allows you to play with finesse and power.
- Stronger beater hub: The beater hub is thicker so that it can handle the rigors of nightly club gigs, or a full-blown world tour. The beater hole was re-shaped to hold the shaft securely.
- One-touch hoop clamp: The DFP-9415 clamps to the bass drum hoop with a flip of a lever. The shape of the cam locks the toe clamp securely to the hoop, and the hoop clamp easily adjusts to fit any thickness hoop.
- Protective bag: The DFP-9415 folds down and fits into a protective bag that will fit into your trap case for transport. This bag keeps your pedal clean and protects it from damage when you pack it away with your other hardware.

Prezzo : €339,00 IVA inclusa (€277,87 esclusa IVA)
