

BEHRINGER V-TONE GMX210

Produttore : Behringer
Cod.Art. : 2358

AMPLIFICATORE PER CHITARRA

The V-TONE GMX210 is the middle-sized offering among the new V-TONE analog modeling stereo amps, featuring 2 x 30 Watts and two 10" JENSEN® / BUGERA™ speakers with two channels, internal effects and tuner. This powerful guitar workstation boasts authentic V-TONE analog modeling for 3 classic guitar amps, 3 speaker simulation models plus 3 gain modes—all individually selectable per channel. There are two independent, full-featured modeling channels offering everything you need from clean to crunch to super-fat distortion sounds. The ultra-flexible FXT function allows independent effects settings on each channel. Our patented* DYNAMIZER® circuitry captures every nuance of your playing and lends tube-like compression to your tone. The integrated tuner is controllable via footswitch.
