

M-AUDIO iControl - Controller MIDI per GarageBand

M-AUDIO

Cod.Art. : 2881

CONTROLLER MIDI

iControl delivers total tactile control over GarageBand. Dedicated transport buttons and jog wheel put record and playback functions at your fingertips. Its eight rotary knobs are easily assigned to track functions like volume and pan, or to parameters for effects such as GarageBand's EQ or any other Audio Unit plug-in. iControl also provides dedicated mute, solo and record-enable buttons for each track, plus a master volume fader. iControl is USB bus-powered, class-compliant, and automatically recognized by GarageBand, making setup a breeze. iControl puts you in complete creative flow with your GarageBand experience.

Hands-on Control

Making music should be about the creative process, not messing with technology or working with its limitations. That's why recording studios in the know have tactile controllers for their music software. Of course, they usually cost a lot more than iControl—but GarageBand breaks the mold in a lot of ways.

Designed for GarageBand

iControl is the first control surface designed specifically for GarageBand. By avoiding the pitfalls of trying to create a generic controller to work with a variety of software, the M-Audio design team was able to deliver a tool that gives you ultimate control over all the functions you use regularly in GarageBand.

Bank on It

iControl features a bank of controls for eight tracks at a time including dedicated buttons for solo, mute, record, as well as rotary knobs assignable for volume and pan. Need access to more tracks? Just press the up/down buttons to assign the eight sets of track controls to a higher or lower grouping of tracks.

Effects and More

In addition to track volume and pan, those eight rotary knobs are

great for programming and tweaking instruments and effects like EQ and Generator. Assignment is simple—just push the Select button associated with the desired track, then press the button in the "Selected Track" group associated with what you want to control. The rotary knobs instantly become controls for that module or effect. To switch back, just press either the Volume or Pan button in the "All Tracks" group.

Caratteristiche

- 8 endless rotary knobs assignable to control volume, pan or effects
- 7 mode buttons assign knobs to control tracks or effects
- 8 sets of Mute, Solo, and Record-enable buttons
- up and down buttons assign the group of eight knobs to additional banks of eight tracks or effect parameters
- master volume fader
- dedicated transport buttons: Play, Stop, Record, Fast Forward, Rewind, Rewind to Start, and Cycle on/off
- jog wheel for easy song positioning
- Option button for extending functionality
- USB bus-powered-no power adapter required
- 5-pin MIDI input jack for connecting MIDI keyboards and devices to your Mac
- automatically recognized by GarageBand for easy setup
- class-compliant driver

Compatibilità

- Audio Unit
- AIFF
- GarageBand 2.0.1

Requisiti minimi richiesti

- GarageBand 2.0.1 or later
- Mac OS X 10.3.4 or higher

M-AUDIO iControl - Controller MIDI per GarageBand

- Available USB port
