VIRTUAL INSTRUMENT

Imagine one instrument where you can find all the synth sounds you love.

One instrument with a huge diversity of sound, with simple access to the presets, and great sound shaping tools: Ultra Focus is that instrument.

Sounds from all the biggest synthesizers.

In the past, a song you made could have included synth sounds from

a variety of sources: modules, keyboards, even a good sampler...

The

Ultra Focus sound design team used every Landmark synth made in the

last 30 years to create the most versatile sound palette ever put together in a single instrument. These brand new sounds will remind musicians of old standards, yet offer better programming and a vastly improved sound quality. Forget about learning to use five synths to produce the sounds you need, free yourself of all the extra gear to make them sound good: with Ultra Focus you've arrived! The next step is to create your own sounds. One great way of doing this is by mixing patches from synthesis that don't sound the same: FM and wavetables, for example. Thanks to the dual layer architecture, this is done with a speed and an ease that has ever been experienced before...!

Great sound shaping tools at your fingertip.

The dual layer architecture means you can mix and match all the included presets to create your own sound. This is the easiest technique to create a fat bass sound, a rich pad, etc. Each layer is complete with a great arsenal of synthesis tools: multimode filter, LFOs, envelopes... And a global section with more filters and LFOs. This amounts to a fantastic arsenal of sound shaping tools, all with the acclaimed sound of the UVI Engine.

ULTIMATE SOUNDBANK Ultra Focus

Caratteristiche

- Improved preset management: reorganize the presets directly on your hard drive!
- Improved preset selection: enter the preset number for a quick and direct access
- Next/previous program selection arrows
- All 4 LFOs sync to your sequencer's tempo
- Every LFO features a waveform selection menu (7 waveforms included)
- Comprehensive multimode filter with a new overdrive section
- The overdrive is included in the augmented list of modulation destinations
- Unique "Timbre" slider: amazing new sounds instantly!
- New Effects section that can be synched to the sequencer's tempo

Prezzo : €299,00 IVA inclusa (€245,08 esclusa IVA)
