

SM PRO AUDIO VU8

Cod.Art. : 3871

VU-METER MULTI CANALE PER MONITORAGGIO SEGNALE E PREASCOLTO

The VU8 is a multi-channel passive VU meter and headphone monitoring system designed for use as an all-purpose audio level indicator. Whether for use in broadcast, studio, live, or just about any other audio production situation, the VU8 gives you simple and immediate multi-channel visual metering. The units metering channels are completely passive and allow for 'Peak' or 'Average' metering configuration. This ensures not only that your signals remain clean and unaltered by any possible interference, but that your signal levels can be visually represented precisely as intended. A handy selectable headphone monitor output is also provided for handy immediate monitoring of any of the available eight (8) channels. Visually striking, the VU8 looks great and adds a professional look to any audio installation.
