

## VOX Valvetronix AD120VT Combo digitale valvolare 120W RMS

Cod.Art. : 3949

### AMPLIFICATORE COMBO DIGITALE VALVOLARE 120 WATT RMS

The AD120VT 120watt stereo combo brings together classic VOX tone with the versatility of a preamp section utilizing Korg's REMS (Resonant structure and Electronic circuit Modeling System). It offers all of the amazing sounds and features for which Valvetronix has been critically acclaimed, and includes the Valve Reactor power amp section that recreates classic tube power amp response. Valve Reactor does this by changing parameters, including class of operation (class A or A/B) and negative feedback settings, for each modeled amp. This patented design utilizes 2 tube power amps with output transformers electronically coupled to solid-state power circuits in such a way that the relationship between the output tubes, output transformer, and speakers is unaltered.
