

VOX VC12 Pedaliera controller per serie Valvetronix

Cod.Art. : 3953

PEDALIERA DI CONTROLLO PER AMPLIFICATORI VOX SERIE VALVETRONIX

The VC12 starts with the same capabilities of the VC-4 Foot Controller, such as Program Selection, Tap Tempo, built-in Tuner (with Mute function), Individual Effects On/Off selection, Wah pedal (that can also control Volume), external Volume pedal input, and Parameter Control. It also offers a second Controller pedal for Volume (both pedals are heavy duty, chrome topped, as used on

VOX Wah pedals), as well as large, heavy duty stomp box switches, independent Bank Up/Down switches, and a Recall switch to automatically revert to the prior selected program. In addition, the VC 12 is capable of storing four banks of Valvetronix amp user programs. Valvetronix amps alone can store 32 programs, whereas the VC-12 offers the user an additional 96 programs for a total of 128. Programs can be stored from any Valvetronix amp into the VC-12, and loaded into another amp. As an added bonus, the VC-12 can control two Valvetronix amplifiers at one time.

Caratteristiche

- CONNECTORS: VOX BUS MAIN connector, VOX BUS SUB connector
- DIMENSIONS: 710 (W)x 244(D) x 76-111(H) mm / 27.95"(W) x 9.61"(D) x2.99"-4.37"(H)
- WEIGHT: 5.6 kgs./12.35 lbs
- POWER: Supplied via VOX BUS MAIN connector
- CONTROLS: Expression pedal, Volume pedal, Recall switch, Effect switches 1-4,
- Channel-fx ON/OFF switch, Bank UP/DOWN switches, Tap switch,

VOX VC12 Pedaliera controller per serie Valvetronix

Tuner switch
