

## VOX VR15 Combo solid state - valvolare 15W RMS

Cod.Art. : 3959

### AMPLIFICATORE COMBO VALVOLARE 15 WATT RMS

The 30-Watt VR30 REVERB and 15-Watt VR15 feature three selectable modes (Clean, OD1, OD2) and deliver sound that goes all the way from classic to extreme. Both are equipped with custom VOX speakers (10" for the VR30 REVERB, 8" for the VR15), and the VR30 includes genuine spring reverb. These new amplifiers employ our exclusive VOX Valve Reactor circuitry in their power amp stages. Its patented design was originally developed for the award winning Valvetronix Modeling amplifiers, and has been further revised for use in these new amps. It uses an actual vacuum tube (12AX7) and virtual output transformer that behave the same way as a tube power amp that uses larger power tubes such as EL84s or EL34s. The benefits to you are the same sound and feel of a traditional tube amp with much lighter weight and lower cost. In their preamp stages, these new amps use discrete transistors for high quality sound generation and ICs for low noise, fast channel switching and other signal management functions. The resulting combination creates a hybrid amplifier capable of delivering superb tone-both vintage and modern-with the high harmonic content and compression found in original VOX AC30 and AC15 amplifiers.

#### THREE MODES FOR AN AWESOME SELECTION

Both the VR30 and VR15 are equipped with 2-channels and 3-modes. The Normal channel delivers that authentic VOX warm, clean tone. With a choice of two different settings for the Overdrive channel, you can go from a smooth vintage overdrive to modern distortion at the touch of a button. You can also use an optional footswitch to

## VOX VR15 Combo solid state - valvolare 15W RMS

switch easily between channels while performing.

**YOU'RE IN FULL CONTROL**

Using VOX pointer knobs the new VRs feature a selection of essential controls: Normal (clean) channel volume, Overdrive channel gain and Overdrive channel volume. The VR30 REVERB includes

controls for Spring Reverb level, Master Volume and Reverb, as well as separate Bass and Treble controls for each channel. The VR15 has

Master Bass and Treble controls. Each amp comes complete with jacks

for Footswitch, Headphone and External Speaker.

Caratteristiche

- 15 watts RMS
- Speaker: 8 inch 8 Ohm custom made loudspeaker
- Channels: 2 channels with 3 selectable sounds
- Tube: 12AX7/ECC83(valve)
- Dimension: 15.5" [W] x 7.5" [D] x 14.5" [H]
- Weight: 17.64 lbs

Pannello di controllo

- Input Jack
- Normal Volume Control
- Channel Switching
- Button (Normal/Overdrive)
- Overdrive Style Button (OD1 or OD2)
- Overdrive Channel Gain
- Control (Controls the amount of pre-amp gain)
- Channel Select LED
- Overdrive Channel
- Volume Control (Controls the amount of preamp signal that is sent to the Valve Reactor power amplifier)
- Master Bass Control (VR15)
- Master
- Treble Control (VR15)
- Power LED

## VOX VR15 Combo solid state - valvolare 15W RMS

Pannello  
posteriore

- Footswitch Jack
- Headphone Jack
- External Loudspeaker Jack (Any guitar loudspeaker cabinet can be used provided that the impedance is between 8 and 16 Ohms)
- Mains Power Switch

Prezzo : €169,00 IVA inclusa (€138,52 esclusa IVA)
