INTERFACCIA AUDIO FIREWIRE

The Yamaha GO46 is a mobile audio solution that features high quality mic preamps and world-class MIDI and audio recording software enabling professional quality recording to a computer in a compact package that can be carried and used virtually anywhere. The GO46 delivers 4-in/6-out multi-channel audio by simple one-cable FireWire (IEEE1394) connection to a computer. Analog input is handled by two combo mic/line terminals (for both XLR and phone jack) on the front panel and two phone jack input terminals on the rear. Four phone jack output terminals are provided on the rear panel plus digital input/output with S/P DIF optical connectors. The GO46 boasts up to 24-bit/192kHz resolution on the analog inputs/outputs and 24-bit/96kHz on the digital I/O. This pro-level quality makes the GO46 perfect for any type of recording, and allows you to capture the full details and nuances of the original source.

Caratteristiche

- Strong, compact and highly portable
- Pro-quality recording with up to 24-bit/192kHz resolution
- Multi-channel output/input with FireWire (IEEE1394) connection
