

## FOCUSRITE Saffire PRO 10 i/o

Focusrite®

Cod.Art. : 4768

### INTERFACCIA AUDIO FIREWIRE

Saffire PRO 10 i/o features the same highly integrated i/o and monitoring control software as 26 i/o, SaffireControl PRO, and can allow for larger recording solutions via the option to aggregate multiple units, all controlled via the same control platform.

Housed within a similar stunning 19" rack-mount case with detachable rack ears, Saffire Pro 10i/o combines eight channels of Focusrite pre-amplification with eight balanced line outputs and stereo SPDIF i/o. The pre-amps featured in Saffire PRO 10 i/o are a derivative of the award-winning Green Series. This pre-amp design upholds the same high bandwidth philosophy whilst boasting class-leading specifications. In addition, the converters adhere to performance specifications far beyond other similarly priced interfaces. As with all Saffire solutions, the unit can be either bus-powered or powered via an external PSU. The unit has also been

designed to take full advantage of the external PSU and to maximize performance when powered in this way. SaffireControl PRO delivers a

control application that avoids any annoying dropdown menus and provides comprehensive custom mix solutions. It also offers quick-select 'tracking' and 'playback' solutions, as well as both the float and shrink/expand facilities found in the original.

Saffire Pro 10 i/o also features MIDI I/O alongside a host of additional processing features. Two channels with DI are also provided, eliminating the need for a separate DI box. The front fascia also boasts two independent headphones outputs with volume control, again customizable within SaffireControl PRO. In addition to the control software, Saffire Pro 10i/o comes bundled with the same acclaimed Compression, Reverb, Amp Modeling and EQ VST/AU

plug-ins for use in the mix.
