SUPERFICIE DI CONTROLLO E INTERFACCIA AUDIO/MIDI FIREWIRE

FireOne is an audio interface plus DAW controller with shortcut keys and a weighted and illuminated jog wheel to inspire creative interaction with the artist's music. It is the first stereo audio interface in its class that records two mic ins and two outs over FireWire at 96-kHz/24-bit audio resolution. The two mic inputs offer phantom power and pad switches and a front panel guitar input allows convenient direct recording of guitar or bass. MIDI input and output are also provided for 16 channels of MIDI.

The most unique feature of the unit is its large, weighted, backlit jog wheel, which allows musicians to zip through their song while the backlight provides useful feedback such as a visual metronome. The FireOne also has transport keys and eight shortcut keys to control functions in most popular DAW applications. Multitrack recording software is supplied as standard, so you'll be set to go right out of the box.

Caratteristiche

- Compact, portable Control Interface with Audio/MIDI I/O
- Up to 24-bit audio resolution, up to 96 kHz sampling frequency
- 2 analogue audio inputs (XLR/TRS combo connectors)
- +48V phantom power
- Input B switchable to high impedance for electric guitar and bass
- Left and Right audio outputs (jack)
- 2 headphone output connectors with separate level controls
- 1 MIDI input, 1 MIDI output

TASCAM FireOne Controller e Interfaccia

- Virtual MIDI through FireWire
- Transport control keys
- Large jog dial
- 8 assignable function keys
- 12-segments stereo LED meter
- Foot switch connector
- Buspower operation through 6-pin FireWire connection
- Low voltage (AC adapter) input
