VIRTUAL INSTRUMENT DI SUONI ORCHESTRALI

Philharmonik™ Classik Edition is an introductory version to the most popular software Orchestral Workstation based on the original Miroslav Orchestra sample collection masterpiece. A superior orchestral instrument for a great price. The Miroslav Philharmonik's plug-in is based on an enhanced version of the SampleTank workstation architecture, offering 16 multi-timbral parts, with full control over the tempo and pitch of the sounds.

Each of the 16 multi-timbral parts can be loaded by selecting one of more than 250 orchestral instruments included in Philharmonik. All of the instruments can be easily found in neatly organized folders within the browser window.

Miroslav Philharmonik's multi-timbral parts can also be saved as combi ensembles, allowing you to load an entire orchestral set with one click.

Each part also offers 4 insert effects, which can be selected among 20 high-quality classical-oriented effects, for creative sound design and arrangements.

Additionally, each part also offers up to 50 sound shaping controls, for maximum flexibility over sound sculpture.

Exclusively, Miroslav Philharmonik also offers a master effects section with individual parts' send capability. These can also be selected among the 20 built-in effects.

Caratteristiche

- An affordable orchestral workstation covering solo instruments and ensembles
- Miroslav's sounds have a musicality and playability rarely found in orchestral sample collections

IK MULTIMEDIA Miroslav Classik Edition

- Beautifully sampled in the historic Dvorák Symphony Hall with true spatial positioning
- Based on the original Miroslav Vitous Symphonic Orchestra sample collection
