SISTEMA DI MISURAZIONE E CORREZIONE AMBIENTALE

The popularity of DAW-based systems have made them the most diffused recording and mixing solution for hundreds of thousands of professional, project and home studios worldwide. While much emphasis is placed on the gear and tools used for composing, mixing and mastering, one of the most critical factors influencing the quality of a music production is the accuracy of the monitoring system. In fact the combination of speakers and room acoustics prove to be the weakest link in the music production chain.
