

YAMAHA mLAN16E2

Produttore : Yamaha

Cod.Art. : 5795

SCHEDA DI ESPANSIONE PER MOTIF XS

The mLAN16E2 lets you connect your Motif XS to your computer via mLAN (Firewire Music Networking) and communicate all of your MIDI

and audio data via a single Firewire cable. The mLAN16E2 transforms

the Motif XS into a 16 channel output, 8 channel input computer audio interface. This allows you, simultaneously to record 14 individual output channels plus the stereo mix to your computer. In addition, the Motif XS's 2 A/D inputs can be used to record other instruments into your computer. Connect a Mic or Guitar to the Motif XS's A/D inputs and even use insert effects as you record. During playback you can bring 4 stereo busses from your DAW back into

the XS to be monitored at the Motif XS's stereo analog output. At this time you can apply additional Motif XS system and master effects to these busses. The incredible effects contained in the Motif XS can be utilized without putting any load on your computer's CPU. The Motif XS with mLAN16E2 can also be used in combination with other mLAN products such as the 01X and i88X to further expand your system. If Motif XS forms part of your rig the mLAN16E2 is, simply, a must.

Caratteristiche

- 24-bit/96kHz 16 channel expansion I/O for MOTIF XS
- Multi Port MIDI Interface
- 24bit/96kHz Audio Interface
- Expandable via mLAN
