CASSETTE DECK / RECORDER CON LETTURA MP3

The CC-222SL is the latest generation of the most popular combination CD/cassette recorder ever. The CC-222SL, like its predecessors, records to both CD and Cassette media at the same time, and features an RIAA phono input for recording directly from a turntable. The newest version adds numerous features users have been asking for, including MP3 file playback, power-on play, optical digital output and time track increment. The CC-222SL has unbalanced RCA inputs, and can be operated as two individual recorders or to record one source to both recorders simultaneously. The Time Track Increment feature automatically adds a CD track ID every few minutes (adjustable from 1 to 10 minute increments), ideal for house of worship and event recording. The CC-222SL can also add a track marker when the signal drops below a certain level, or when the record button is pressed. Using Tascam CD recorders is simple, which is why they're the first choice for houses of worship, schools, and other contractor and consumer applications.

Caratteristiche

- Cassette to CD-R/RW dubbing and vice versa
- Continuous playback between decks
- Individual RCA unbalanced analogue inputs/outputs on both decks
- NEW! Line output 2 selectable between tape-only output and CD or tape output, with priority to tape
