

## TC HELICON HarmonyControl Guitar

Produttore : TC Helicon

Cod.Art. : 6661

### CONVERTITORE MIDI PER CHITARRA

All you forward-thinking singers who use a harmony processor and play guitar now have the option of adding harmonies to more songs, more easily with the must-have harmony accessory;

HarmonyControl |

Guitar, by TC-Helicon. HarmonyControl | Guitar reads your guitar playing and tells your MIDI equipped harmony processor how to sing "the right stuff". If you've ever used Key and Scale harmony, you'll know it works wonderfully for a lot of songs, but now you can add even more harmony songs to your repertoire while you focus

on playing and singing your best. Previously, only MIDI keyboard players had the ability to create spontaneous harmony parts but now it lies in your hands too.

It's Easy

All you do is connect HarmonyControl between your guitar and pedal board or amp. Your pure guitar tone is unaffected; it's as if HarmonyControl wasn't there. A supplied high-quality MIDI cable connects to the harmony processor you've already set up as usual with mic and PA connections. As you play normally, HarmonyControl deciphers the chords in your music and sends it to your harmony processor through MIDI. It's working all the time so that when you lift the bypass on your processor, harmonies flow forth instantly.

It's Versatile

Your harmony processor isn't made by TC-Helicon? Too bad, but the good news is that HarmonyControl is compatible with a wide variety of harmony processors by TC-Helicon and others. Of course, our VoiceWorksPlus, VoiceLive, and VoiceWorks have extended features

that make the harmonies even more musical. If your harmony processor has a MIDI input, it's likely HarmonyControl can give you the effortless musical control you've always hoped for.

### Caratteristiche

- **Guitar-controlled Chord Mode:** Select a chord mode preset on any of these products and your guitar can supply the chords in real-time. Guitarists used to go to great expense to do this with MIDI guitar; now you can do it with your favorite axe!
- **Key setting features:** For those who still appreciate the power of fixed key harmonies, set the key to your songs with a footswitch press and a quick guitar chord. Don't know the key? Just play some of the chords from your song and HarmonyControl will decipher the key in real-time.
- **Chromatic Guitar Tuner:** Easy to read note and accurate pitch display keep your licks in tune even with altered tunings.
- **On/Off Button:** Returns your harmony processor to its original function. This is great for times when the key and scale you've set work perfectly without the guitar's help
- **Universal external power supply**
- **Progettato per essere usato con armonizzatori vocali**

Prezzo : €199,00 IVA inclusa (€163,11 esclusa IVA)
