

FOCUSRITE Liquid Mix 16

Focusrite®

Cod.Art. : 6827

PROCESSORE DSP FIREWIRE MULTICANALE 16 CANALI

Liquid Mix 16 is the latest product in Focusrite's award-winning Liquid range, bringing the power of Liquid Mix to an even wider audience. Combining the same pool of classic EQ and Compressor emulations with a killer control surface, Liquid Mix 16 brings the sound of the obsolete, the priceless and the historically significant, within reach of even the most modest studio owner. Each of the sixteen mono channels provides Compressor and EQ emulations selectable from a huge pool of high-quality vintage and modern day classics. Forty Compressors and twenty EQs are available

straight out of the box, with some additional emulations available for free online. As with the original Liquid Mix, a hybrid seven-band 'super EQ' is available in every instance, built out of separate classic EQ sections. Liquid Mix 16 also offers a 'free' mode for the compressor. Original compressors with limited or absent controls suddenly become fully featured - yours to use as you choose. Each channel appears as a separate VST/AU/RTAS effect

within the sequencer and will work within all major applications, including Pro Tools. The same optional expansion card is available for both Liquid Mix and Liquid Mix 16. With Liquid Mix 16, the card allows users to increase the number of available channels at 48kHz from 16 to 24 (sold separately). Liquid Mix uses the same patented Dynamic Convolution process as Focusrite's other Liquid products. Unlike standard convolution techniques, Dynamic Convolution utilizes vast processing power to sample the effect of a classic processor on a series of audio pulses, at many different gain settings and frequencies. All this processing is done using onboard DSP, so the processing has a relatively low effect on your computer's own CPU, (variable subject to the sequencer used).

FOCUSRITE Liquid Mix 16

Liquid Mix 16s DSP is housed within an elegant desktop control solution and connects to the computer via Firewire, which also provides bus-powering. The physical metering, rotary controls and buttons from the original Liquid Mix are provided here. The hardware helps to provide a tactile ergonomic solution, placing the sounds of an array of classic processors at your fingertips. You can choose to control each channel either from the desktop control unit, or from within the sequencer or an alternative controller, using the same simple GUI from Liquid Mix, which functions exactly like a plug-in. The Liquid range of products has won in excess of twenty awards to date, becoming a worldwide hit in the audio production world, from project studios to post production and broadcast facilities, not to mention the Live arena. Focusrite looks forward to bringing Liquid technology to a growing audience, providing the sound of vintage processing and the reliability of digital processing to studios the world over.

Caratteristiche

- Unequaled Variety of Classic Emulations
- 40 compressors and 20 EQs, sampled from vintage originals with a free expanding library online.
- One of a Kind
- The unique patented Dynamic Convolution process delivers unparalleled EQ and Compression emulations.
- Can you hear the difference? Take the Challenge and find out.
- Hybrid Super EQ
- Create your own totally unique 7-band super EQ, built out of separate classic EQ bands.
- Compressor 'Free' Mode
- Original compressors with limited or absent controls suddenly become fully featured - yours to use as you choose.
- Hardware-powered Plug-ins
- 16 instances of Liquid Mix run off the desktop hardware (24 with the optional expansion card installed), vastly reducing the impact on your CPU.*
- Tactile Control Surface
- Apply EQ and compression using hands-on tactile controls.

FOCUSRITE Liquid Mix 16

Just plug in, power-up, and dial in the perfect mix.

- Full Plug-in Operation
- Each instance has a dedicated GUI which functions exactly like a plug-in, providing full recall within your session.
- Desktop Metering
- 12 LED meters on the hardware controller display i/o levels and gain reduction alongside their respective controls.
- Optional Expansion Card
- The optional expansion card, which is easy to install and fits neatly into the underside of the unit, allows Liquid Mix 16 users to increase the number of channels at 44.1/48kHz from 16 to 24 and the number of channels at 88.2/96kHz from 4 to 8.
