SIMULAZIONE DI AMPLIFICATORI ED EFFETTI PER CHITARRA

AmpliTube 2 Live is a complete guitar amp modeling solution and effects powerhouse with ultra accurate models of the most sought after gear and the ability to mix and match separate components to build your own amps and craft a unique and ultimate tone. It comes both as a standalone application and a plug-in compatible with your favorite recording software, including Pro Tools, Cubase, Logic, GarageBand, and others. Fully MIDI-controllable, AmpliTube 2 Live is based on AmpliTube 2's unique DSM™ technology and includes 3 guitar and bass amplifier models of the most sought after vintage gear for a total of 15 amp combination possibilities, 11 effects, a built-in tuner, an amazing selection of more than 128 customizable user presets, and SpeedTrainer, an integrated audio player with pitch and speed control, ideal for learning your favorite songs. AmpliTube 2 Live is included free into StealthPlug, the first audio interface for guitar and bass integrated into a simple, miniaturized, 1/4" jack to USB cable with full input/output processing for your PC or Mac. Also, AmpliTube 2 Live includes AmpliTube X-GEAR, with additional amps and cabinets, dual rig and the possibility to use AmpliTube 2 Live with any other "Powered by AmpliTube" software with full mixing and matching between the included models.
