

BLUE SKY EXO - Sistema di Monitoraggio 2.1

Cod.Art. : 7195

SISTEMA 2.1

Blue Sky's EXO stereo monitoring system combines true, full range monitoring with the convenience of a desktop remote control hub - all at a great low price. Like the larger Blue Sky systems used in professional recording studios and movie sound stages, the bass is handled by a separately enclosed woofer, and the mid/high frequencies by the satellite speakers, leaving both uncompromised to do their jobs properly. The result is accurate, full range sound with solid, controlled bass, clear mid/highs, and exceptional stereo imaging. The overall volume of the system and the level of the bass can be controlled easily and conveniently from the desktop remote hub, which also features an iPod input and headphone jack. Professional connectors on the rear of hub accept simultaneous inputs from a professional mixer/DAW and a soundcard/CD player, making EXO perfect for applications as diverse as desktop music recording, audio production, multimedia creation, video editing and gaming - or simply for listening to music or watching movies with stunning, full range sound.

Caratteristiche

- True, full-range stereo monitoring system
- Two - 3" 2-way satellites, with 1" soft-dome tweeter
- Separate 8" subwoofer, for extended low frequency response
- 160 Watts of total system power (35W per satellite, 90W subwoofer)
- Convenient desktop remote control and connection hub
- XLR / TRS inputs for pro mixers and DAWs
- RCA inputs for computer soundcards and CD players,

BLUE SKY EXO - Sistema di Monitoraggio 2.1

etc.

- 3.5mm mini jack input for iPods and mp3 players
- 3.5mm headphone jack, which when used mutes the monitoring system (headphone level is controlled via the GAIN knob on the HUB)
