

## BEHRINGER Ultramizer Pro DSP1424P

Produttore : Behringer

Cod.Art. : 0731

### PROCESSORE DI DINAMICA

The ULTRAMIZER PRO DSP1424P confers the added value of 24-bit resolution to the already hugely popular ULTRAMIZER PRO DSP1400P, plus much more. Its powerful new DSP engine lets you add multi-band, program-adaptive compression and limiting for both low and high frequencies while at the same time remaining absolutely "inaudible". No matter if you want to increase the loudness of your mastering recording or double the loudness of your PA system without adding more amplifier power, the DSP1424P is the perfect tool. A peak limiter protects against any clipping and dangerous sound pressure levels and the built-in 3D stereo surround processor provides unbelievable spatial enhancement and improved stereo imaging, giving your mixes that often sought-after extra "gloss", while the noise reduction system keeps things clean. Despite the sheer scope of added functions and improved functionality, the DSP1424P is still super easy to use and operate, letting nothing come between you and your music. A free WINDOWS® editor is downloadable at BEHRINGER's website.

### Caratteristiche

- Loudness maximizer multibanda/enhancer digitale a 24 bit
- Compressore automatico a band-split variabile e limiter digitale intelligente
- Convertitori a 24bit A/D e D/A con sovracampionatura a 64/128
- Enhancer con "SuperBass" regolabile separatamente, exciter
- Processore surround 3D stereo per un imaging spaziale intensificato
- Display separati per livello di ingresso/uscita e gain reduction

Processori di Segnale > Sistemi di Controllo Diffusori

## BEHRINGER Ultramizer Pro DSP1424P

- Compatible con Windows 2000, XP, Vista, 7 e Mac OS  
X

Prezzo : €109,00 IVA inclusa (€89,34 esclusa IVA)
