

## BEHRINGER Intelligate XR2000

Produttore : Behringer

Cod.Art. : 0733

### PROCESSORE DI DINAMICA

Intelligent dynamic control

Our INTELLIGATE XR2000 was designed to fulfill the highest demands and offers maximum signal control. Voice-over applications, creative envelope shaping, noise suppression in quiet passages... No problem, especially with the transparent user interface and "traffic light" LED displays.

UTR (Ultra Transient Response) gate circuit

Slow noise gates often rob your audio's brilliance by gating signals during the attack phase. BEHRINGER's UTR circuitry prevents this with its ultra-fast signal detectors and high-quality class-A VCA. Clicks and pops at the gating point are virtually eliminated by the extremely low leakage of the control signal into the VCA's audio signal path. An extremely important factor in judging the quality of a gate.

IRC (Interactive Ratio Control) expander circuit

The INTELLIGATE XR2000 features an IRC expander, which virtually eliminates all switching noises. Even at ratio values above 1:8, the XR2000 always sounds musical with practically no side effects. Success is pre-programmed.

### Caratteristiche

- Expander, Gate
- Ducker interattivo a 2 canali con frequenza selezionabile
- 6.5 mm jack e XLR

Prezzo : €95,00 IVA inclusa (€77,87 esclusa IVA)
