

TC ELECTRONIC Combo Classic

Produttore : TC Electronic

Cod.Art. : 8706

As with all of our combos ComboClassic features an amp head based around our award-winning RH450 amp matched with TC customized Eminence drivers and tweeter. The results? A rich, warm and classic sound from a package with some incredible features that will take your sound to a new level. ComboClassic's TubeTone™ control section delivers all of the rich characteristics of a full-on tube amp while SpectraComp™ delivers more bite and punch than any other bass amp compressor by allowing 'per string' compression. ComboClassic has also been designed with maximum flexibility in mind. You get easy access to the amp head to remove it and swap it with others in the range or simply use it on its own outside of the combo. The amp delivers an impressive 450 Watts of power and includes our Active Power Management™ system so you get maximum power impact and a combo that behaves like a tube amp at full blast. ComboClassic's two customized Eminence 10" drivers and a 1" tweeter are all housed in a vertical 18mm hard-wearing plywood cabinet with a pull-up handle and wheels so you can easily take this combo anywhere you like.

Caratteristiche

- Wide range instrument input: Classic450 accepts any bass with any pickup system.
- Integrated Linedriver: Quality can vary wildly with built-in linedrivers, but Classic450's linedriver is transformer balanced and galvanically isolated from the rest of the amp, which means no ground loops or hum. And don't worry about long cable runs - Classic450 will draw at least 100m of cable with no drop in audio quality. The line driver output features a pre/post switch that

TC ELECTRONIC Combo Classic

allows you to select where the audio tap is placed; before or after the pre-amp section.

- Output and Linedriver Mute: The Mute switch allows you to instantly silence your amp while tuning, changing instruments or simply taking a break.
- Tuner Out: Connect your tuner and tune up. This allows you to tune up in silence.
- Effects Loop: The effects loop allows you to insert effects of your choice between the Pre amp and power amp section. The Effects loop also allows you to link two amps together using the Pre-amp out and Power amp in connectors.
- World-ready Power Supply: The ultimate in convenience for the traveling musician. The built-in power supply operates from 90 to 240 Volts, making life a lot easier for the musician on the road as there's no complicated fuse changing.
- Active Power Management™: The high power output level of Classic450 is accomplished by using Class D amplifier technology in combination with TC Electronic's Active Power Management™.
- Portability: The versatility of Classic450 wouldn't really make sense if it came in an oversized, bulky box. Its stylish design with the smooth grab'n'go handle just spells out portability.
